VISION....

We find that working with older adults on their own goals while making small changes to the home environment is powerful medicine.

AIM

- Sometimes elderly people forget to take their medicine at the correct time.
- They also forget which medicine He / She should take at that particular time.
- And it is difficult for doctors/ caretakers to monitor the patients around the clock. To avoid this problem, this medicine reminder system is developed.

BENEFITS

- Greater indepence for older adult.
- Safety, comfort and covenience.
- Relief for family care givers.
- Prevents avoidable trips to the hospital.
- · Personalized care.

HOWIT WORKS..?

- An app is built for the user (caretaker) which enables him to set the desired time and medicine. These details will be stored in the IBM Cloudant DB.
- If the medicine time arrives the web application will send the medicine name to the IoT Device through the IBM IoT platform.
- The device will receive the medicine name and notify the user with voice commands.
